

Missing Inspections and Redacted Data

The EIR response started with 1,037,164 rows. Any row without an inspection grade, whether it be null or redacted with an 888 or 999 placeholder, was removed. Rows where the inspection date was null were also removed

Available Inspection Record

The AIMS register contained identity features such as the design or environment, these were kept where the row successfully joined to the filtered EIR response on asset id

Interpretable Grade

Assets with a null or 0 grade in the EIR response were dropped. (37 grade 0 and 31 null).

Poor feature availability

Assets were dropped for when certain features were completely missing. Feature specific EDA notebooks describe details.
